scratches, bleached
and tired surfaces

HG meubeline for light-coloured woods

HG "meubeline for light-coloured woods" is a high-quality maintenance product for stained, varnished, oiled, untreated or waxed furniture made from light-coloured wood types such as pine. White marks, water stains, alcohol rings disappear. Dull and bleached/faded surfaces regain their natural colour. Scratch marks are camouflaged.

Directions for use: HG "meubeline for light-coloured woods" must always be tried on a small inconspicuous area first. Apply HG "meubeline for light-coloured woods" liberally in straight lines in the direction of the wood grain and allow to penetrate for 6-10 hours. Treat areas where HG "meubeline for light-coloured woods" has been fully absorbed during this period, again. At the end of the penetration period wipe away any remaining "meubeline" with a clean cloth. Allow eight days before repeating treatment. If the area to be treated has been waxed then apply HG "meubeline for light-coloured woods" liberally and remove loosened wax after 2 hours. Then treat as described above.

Attention: Transport and store the bottle upright. Can also be used on varnished light-coloured woods if the varnish is able to absorb dampness. Dark patches and rings will not be removed. If a layer of varnish has been damaged by moisture or heat, this will also look like a stain. However, those stains are not in the wood and cannot be restored by this product. High-gloss areas may become somewhat dull, because the wood will regain its natural colour after treatment it may become somewhat darker.
