HG grout cleaner concentrate

HG "grout cleaner concentrate" is a buffered, synthetic cleaning agent specially formulated to clean all grout joints particularly between (glazed) wall and floor tiles and masonry.

Directions for use: Dilute HG "grout cleaner concentrate" 1:4 in lukewarm water. Apply the solution to grout joints with a brush or scrubbing sponge. Leave to work for approx. 10 minutes then scrub the grout with the brush or scrubbing sponge. Finally clean with lukewarm water to remove the dirt (it is important to clean the sponge repeatedly in clean water). Leave to dry. If necessary repeat the application. Discoloration of grout in shower cubicles and bathrooms is often caused by limescale, in which case HG "professional limescale remover" should be used. For grout that has become black (mould) use HG "mould-spray". To quickly and easily refresh tired looking grouting we recommend the use of HG "grout colour".

Coverage: 0,5 litre is sufficient for 10-15 m² tiled surface.

Attention: Transport and store the bottle upright. Safe to use on coloured grout, but should not be used on high gloss painted grout joints. Not to be used on grout of lime-containing tiles (as marble etc.). The results may not be optimum on silicon grouting. • Medical personnel can request the data sheet via +31 (0)36 54 94 777 • The consumer's information sheet can be obtained via www.HG.eu
